

The concept behind my new company is to develop a platform that connects individuals looking for temporary employment with businesses and organizations seeking people to fill those temporary positions. Many NGOs, INGOs universities/colleges, and businesses do not have the resources necessary to manage their events/projects effectively; therefore, this program provides an easy way for those organizations to communicate their needs regarding the number of people they need, what type of work they will perform, when/where they will work, and how much they will be paid/donated.

A major challenge facing this company will be verifying that applicants are not only trustworthy but also actually appear at the job site to complete their shifts. To address this challenge, there will be a verification process that creates a profile for all users of the platform. After each job is completed by a worker, they will be rated by the event organizer. Workers who have positive ratings will receive many more job offers than those with negative ratings; therefore, negative rated workers may not be permitted to continue using the platform. Another challenge will be to build enough user traffic during the initial launch phase; building traffic can be accomplished through partnerships with universities, colleges, non-profit organizations (NGOs), and corporate partners/companies, as well as providing new users with discount offers when they sign up. The platforms will generate revenue from the service fee charged to the event organizers for successful short-term hires, from advertising displayed on the web and mobile app.

#### Future Expansion:

The platform will offer subscription-based HR management systems to assist businesses with assigning work, tracking progress of employees, getting notifications when work is completed, and quickly assigning new assignments. By using this system, businesses will increase employee productivity, and will generate long-term value from the use of this app beyond its intended use as a temporary hire service.
